The Urban Game
You will create your own village and see the development of urbanization and industrialization during the Industrial Revolution in Great Britain.

Over several rounds, your village will increase in size and develop into an industrial city.

Your buildings **CANNOT** touch other buildings!

**Tips:**

- Draw light (you will make mistakes and need to erase)
- Use color pencils if you prefer.
- Don’t draw hasty. Think and plan.
Let’s Begin!

- The year is 1700 and the nation is England. The scene is a rural village.
  - Label on your map the North, South, East and West in their respected directions.
  - Provided a name for your village (Be Creative!)
- Your village should contain the following items at this point:
  - A river that runs from one end of the map to the opposite end (your river should not be more than 3 square wide).
  - Two roads (1 square wide) that intersect near the middle of your map and extend off the map in each cardinal direction (East to West, North to South).
  - One wooden bridges (1 square wide).
  - 10 houses.
  - 1 church.
  - 1 cemetery.
  - 1 store.
  - 1 pub.
  - 1 coalmine.
  - 1 park.
  - A 10x10 area for a commons land. (Do not color or shade in).
John Constable, *Wivenhoe Park, Essex, 1816*
Joseph Turner, *Mortlake Terrace*, 1827
Essential Questions

- What are the positive and/or negative aspects of urbanization?
- Is urbanization a beneficial or hurtful aspect of the Industrial Revolution?
- Is urbanization an issue that societies still see today?
It is now 1745. England’s geography is unique in that no section of the country is more than 90 miles from the sea and there are many navigable rivers that crisscross the countryside. An enterprising young capitalist (you) decides to invest money in the construction of a canal.

The profits from your canal are astonishing! For example, one canal built in 1745; the Oxford Canal yielded a 300% annual return for its investors for a period of more than 30 years. This new revolution in transportation reduced the price of raw materials and reduced the cost of transportation drastically. Coal could now be transported from the mines to the towns for half the price of horse-wagon transportation.

• Construct a canal (a waterway 1 square wide that runs parallel to the river and connects to the coal mine.)
• Since you invested your money, thereby making a tidy profit, build yourself 1 nice home anywhere on the map you would like it to be.
It is now 1750. For a variety of different reasons (soap, diet, sanitation, etc...) there is a population explosion in England, and your village. The cursed Bubonic Plague which for centuries wiped out your village has been virtually eliminated due to the disposal of sewage into the canals and ultimately the ocean.

- Add 5 houses (Total 15).
It is 1760. The people of your village need a bit more food and goods to meet the needs of the new inhabitants. Coincidentally, a number of other noteworthy events occur around 1760. First, a number of new mechanical inventions for farming are developed. Perhaps the greatest impact was Jethro Tull’s creation of the seed drill and the horse drawn cultivator. Also, farmers begin to experiment with new, more productive farming practices like crop-rotation, new fertilizers, & new livestock breeding techniques.

Consequently farm production is significantly increased. But there is one problem. Most farmers own one tract of land. Why should they, or how could they, invest in expensive machines when their land is so small? What’s more, it’s almost impossible to buy land from anyone! At the same time, pressure is placed on Parliament (British Government) by large and small landowning farmers to make more land available. Where is the land coming from? The Commons. A series of laws called the Enclosure Acts are passed by Parliament. This means that land owners can buy pieces of common land from the government to establish bigger pieces of land.

- You may from this point forward build on the commons
- Add 5 houses (total 20) and 1 more nice house (on what used to be the commons).
It is now 1773. A man named Richard Arkwright invents a new machine that can spin and weave cloth a hundred times faster than could be done by hand in a farm cottage. He calls his new machine the Water Frame because its principle source of power was water. Let’s imagine that the first water frame was built in your village (because of the river). Since the water frame was large, a special building was needed and thus, the first factory for producing cotton cloth was built.

- **Add 1 factory to your village**
  - Remember, the cotton factory must be placed on the river bank. Canal water is not swift enough to generate the power to the working parts of the water frame.
- **Add 5 houses for workers (total 25)**
It is now 1774. Workers are needed to work in this new factory. Since many people (women) cannot compete with the spinning and weaving of cloth made in the factory and there are large numbers of poor families who have lost their livelihood due to the Enclosure Movement, we do not have an available supply of workers. People move to your village to find work.

- Add 15 houses (total 40);
- 1 church
- 1 pub
- 1 store
- You may draw additional roads (1 square wide) and 1 additional bridge (1 square wide)
The profits from the first textile factory are enormous. It should be no surprise that Richard Arkwright is referred to with two titles: the first millionaire and the father of the factory. New factories are built in your community.

The early owners of these factories called themselves capitalists because they had the capital or money to purchase the raw material, the building, the water frame, and to pay their workers a fixed wage and make a profit.

- Add 5 new factories (remember, they must be on the river bank as they need water power)
- Add 15 houses (total 55)
It is 1780. Unemployed workers from surrounding areas flood into your community looking for work. Although wages are very low, they look attractive to starving families. Housing is in great demand and for the first time a new kind of housing is constructed called Tenements. Here, dozens of families reside under one roof. All workers walk to work so the tenements must be near the factories.

- Add 5 Tenements (within five squares of a factory).
It is now 1781. More workers need to live, eat, shop, drink, and worship. We need the social support services to go along with the demand.

• **Add 1 store**
• **1 pub**
• **1 school for those families wealthy enough to send their children (boys) to school.**
• **1 church**
  • Since workers in the factories work 6 days a week, the only day of rest is Sunday. People flock to your churches so make them convenient for them.
It is now 1782. Workers work long, hard hours in the factories. The average work day begins at 6:00 a.m. and ends at 9:00 p.m. There is only a 30 minute break for lunch. After work, exhausted and “stressed out,” workers stop at their local pub for some relaxation. Alcohol begins to be consumed throughout England in record amounts.

- Add 5 more pubs
- Destroy 5 houses
- Add a jail
- Add 4 Tenements
It is now 1783. Workers barely eke out a marginal existence. There is never enough money to save and some workers go into debt. Few, if any, could afford to send their children to school. Still, there are a few families whose lifestyle is quite comfortable, even luxurious. Who are they? They are the large landowning farmers and factory owners.

Handsome manor houses are built and some are lavishly furnished with art. These new rich are not part of the aristocratic class of England, but they now can enjoy some of the refinements of the aristocratic rich such as food, servants, furniture, education, fine clothing, carriages, etc.…

- Add 2 nice homes
- Add 1 factory
- Add 15 houses (total 65) for management personages
The year is 1785. A man named James Watt invents a new machine called the steam engine. The steam engine replaces the water frame. First, it is far more efficient. Second, it allows factories to be built away from the river. This source of power is more mobile. Capitalists quickly replace their water frames with steam powered weaving and spinning machines. The main business in England is still textile manufacturing.

- **Add 10 factories with smoke (total 17)**
  - Smoke should be 4x4 square of light shading over each factory. Add smoke to all other pre-existing factories.

- **Add 1 nice house**
  - since people continue to get rich.

- **Add 5 houses (total 70)**
- **Add 1 Tenement.**
The year is 1800. A man named Henry Cort has just invented the puddling process. This process makes it possible for coal, which is, fortunately, in abundant supply in England, to be used as the primary fuel in the new iron industry. Consequently, your town is thrust into the “New Age of Heavy Industry.” Larger factory districts appear which manufacture iron at low prices and that can easily be transported by your canal.

- Add 1 new coal mine
- Add 1 new iron bridge to replace the old wooden one. (Shade in the old bridge)
- Add 5 houses (total 75).
The year is 1815. Coal miners are busy mining coal. There is a great demand for coal right now: home-heating, fuel for the steam engines, and for the production of iron.

- **Add 1 coal mine.**

Although in the 1700’s coal miners were adults who worked in the winter to supplement their wages, in the 1800’s they are typically children between the ages of 8 to 14. The work is dangerous and unhealthy. Children become victims of black lung disease, explosions & accidents. Their growth is stunted as they spend their 14 hour days stooped over. They are malnourished and unable to exercise or eat properly. Casualty rates go up.

- **Draw 1 cemetery.**
It is 1820. The existing canals and dirt roads cannot accommodate the heavy industrial traffic. New experiments with transportation using the power of a steam engine are tried. The most successful appears to be a steam engine that pulls a series of wagons or cars on an iron track. The first railroad is tested and proves to be quite effective.

- **Add 1 major railroad line connecting your factories district to your coal mines.**
  - This is one continuous track which must connect all factories and mines, it should not go across your entire city.
- **Add 5 houses (total 80) for railroad builders.**
It is 1827. This new “revolution” in transportation draws thousands of people to your community. Soon there becomes a surplus of workers. Capitalists who wish to ensure their profits decide to hire women and children over men because they can perform the same factory labor at one-half to one-quarter the price. More and more children leave their homes to work.

Depressed, ashamed, and angry with their wives, and children toiling in factories, many men turn to crime, and the social life of the pub. For the first time in England’s history, alcoholism appears in epidemic proportions. Family life that existed for hundreds of years in England is disrupted. Family members seldom eat together or see each other.

• Add 2 jails, 4 pubs, and 2 tenements.
It is 1838. Let’s look at the working conditions in the factories. The two predominant factories are textile and iron (steel). Working conditions in either of these two were appalling. Many workers contracted the deadly factory fever or white lung disease. It was probably a variety of lung ailments: cancer, tuberculosis, emphysema, etc… Other workers were injured on the job in factory accidents.

There were no protective railings around the huge moving mechanical parts of machinery. Children, weakened from lack of proper sleep or diet, stumbled into machinery and were mangled. Women with long hair that became undone often found themselves caught in moving machinery. Regardless, if you were unable to work, you were fired. There was no health insurance. There was always a daily line of unemployed workers waiting to fill the “vacated” jobs.

• Add 2 hospitals and 1 more cemetery.
It is 1840. There is a need for quicker transportation. Coal, iron, finished products, & raw materials must all be transported from one area of England to another. In Ireland in the late 1830's a devastating potato famine drove hundreds of thousands of Irish to England. Here was the cheapest of labor possible to build more railroads.

- Add 1 more railroad line passing east to west through your town.
- Add 5 more houses (total 85)
- 1 tenement for the new railroad workers
It is 1842. There are some advantages to urban dwellers. City life is very different from the country life. For the small but growing middle classes a whole new cultural life is available. Museums, theater, opera, restaurants, plays & concerts are made available. Whereas before only the aristocrats could afford the arts, now the middle class enjoys the fine life of culture and good living.

- Add 1 theater and 1 museum.
- Add 2 schools for upper class students.
- Add 1 nice house.
It is 1845. There are no pollution controls so the air in your community looks dark. Windows, walls, even trees are covered with layers of soot. The river that once flowed through your quiet village for hundreds of years is now unfit for drinking, bathing, or laundry. A new disease begins to take the lives of people. Malignant tumors grow in peoples bodies and the term cancer is first used in the medical profession. The average life expectancy for the poor classes is now 30 years of age.

Your city is overcrowded and shrouded in factory smoke. The noises, the loss of privacy, & the loss of the family unit shatters the peace of the old ways. Suicide rates double, then triple.

- Add 1 cemetery.
- Add 1 jail.
- Add 1 hospital to accommodate the victims of urban life.
It is 1850. By this year, several million acres of good English land has been enclosed and sold to private individuals who own large estates. Despite the misery this creates for England’s landless poor, the economic benefits for the rich are obvious. These farmers purchase the newest power-driven machinery and can easily feed the working class of England (including the Irish immigrants).

The small landowning farmer is crushed by the enclosed movement. They cannot afford the machinery and therefore cannot compete and grow food profitably. Thousands of these folk leave their villages (where their ancestors had lived for hundreds of years) and move to towns and cities looking for work to feed their families. Some refused to leave but took jobs working for the large landowning farmers. By the thousands, they moved to the bleak, uninviting towns of the north and the new cotton mills.

- Add 20 houses (total 105)
- 5 tenements
- 2 stores
- 1 church
- 5 factories
- 1 pub
- 3 more nice houses
Making the Modern World
William Wylde, *Industrial Manchester*, 1851
Congratulations, your city has successfully developed into an industrial center.

Get with a partner and compare your cities:

• Think and discuss the Essential questions posed at the beginning.
• Answer the following questions on the second page of the packet.
